

## PCR Plates - 96 x 0.1 ml

### Description

These plates are specifically designed for PCR and qPCR applications and fit most (q)PCR cycler models that accept Low Profile (LP) products.

They offer:

Guaranteed and tested absence of detectable DNase, RNase, metal, pyrogens.  
Can be used without autoclaving.

The importance of disposables for a (q)PCR reaction is often underestimated. These PCR plates are high-quality (q)PCR tools and contribute significantly to reproducible and reliable results.

Benefit from the advantages and ease of use of the highest quality (q)PCR plates. They always have the same raw material composition and uniform wall thickness. Variables in uniformity and material composition can thus be excluded.

### Specifications

96 x 0.1 ml Thin-wall plate  
Low profile, SEMI skirted, frosted  
Suitable for robotic handling  
Colour: white  
25 plates/package

Order No.: 102.0079
