LED White Light Transilluminator

Description

LED White-Light Transilluminator – Precise Illumination for Reliable Results

Benefit from uniform illumination across the entire illuminated surface! The LED white-light transilluminator enables high-contrast visualization and reliable inspection of protein gels and other translucent samples.

Modern LED technology ensures homogeneous lighting, supporting precise analyses in the laboratory.

LED white light transilluminator

Order No: 110.0261

Optimal recording quality with best light diffusion for:

- Protein gels
- X-ray films
- Autoradiograms
- Microtitre plates

Specifications

- 20 x 20 cm light surface
- LED panel, individual LEDs matched to each other
- High homogeneity:
  diffuser for optimised illumination
- Stainless steel frame for longer shelf life

UV_053_E 10/2026 Subject to technical changes and errors.
