SafetyPLUS
UV Safety Glasses

Model SafetyPLUS

UV lamps and transilluminators are powerful sources of UV. It is dangerous to expose yourself unprotected to the radiation of UV lamps.

Short-wave (254 nm) and medium-wave (312 nm) UV light damages eyes and skin.
Long-wave (365 nm) UV light can also affect people who are sensitive or taking medication.

We therefore strongly recommend that you protect yourself against UV radiation by wearing protective eyewear or face visors.

Model SafetyPLUS
Blocks wavelength from 200 - 380 nm.

Description
Clear safety glasses with very large lens for unrestricted vision when working.
The patented Platinum® coating ensures permanent freedom from fogging for a very long time.
By treating both sides of the lens, PLATINUM technology ensures superior durability and resistance.

A very lightweight and comfortable goggle that provides all-around UV protection to the eyes with additional top and side shields.

The goggles block ultraviolet radiation while providing optimal contrast in vision through crystal clear lenses. Reduces eye fatigue.

Specifications
- Ultra-wraparound frame for optimal protection
- Non-slip nose bridge
- Dual-material temples for enhanced comfort
- PLATINUM coating (anti-fog/anti-scratch – KN)

Technical Data

Weight	28 g
Frame type	Rimless
Material frame	Polycarbonate / TPR
Material glasses	Polycarbonate
Colour of frame	Black/orange
Colour of glasses	Clear
Standards	EN 166, EN 170
Coating	Platinum®-Coating Anti-Fog
Accessories (optional)	Headband for better hold
ATEX certification	21ES1011
Glassware marking	2C-1.2 1 FT KN CE
Frame marking	EN166 FT CE UKCA
Order No.	110.4802

AS_004a_E UV-Safety-Glasses SafetyPLUS 11/2026 Subject to technical changes and errors.
